Smith's Computers

FORMERLY

"Eby's Handy Tables"

Four special editions now published. Each especially adapted to the work intended. Guaranteed to give satisfaction or money back after five days' trial. Sent anywhere in the world on receipt of price. If interested in any of the editions write for special descriptive literature. Send all orders to

**J. FRANK SMITH, Publisher.
Pleasanton, Kansas.**

Creamery and Produce edition of "Smith's Computer" for calculating butterfat and values, covers all calculating in creameries, cheese and ice cream factories; also commission merchants, wholesale and retail dealers in poultry, eggs and butter.

Price, \$2.50

Lumber and Grain edition of "Smith's Computer," a quick and complete computer for retail lumber, hay, grain, coal, etc.

Price, \$2.50

Mercantile edition of "Smith's Computer," especially adapted for merchants in proving invoices, for billing clerks in wholesale houses and railway freight offices and making out checks for all kinds of pay rolls.

Price, \$2.50

Special Mercantile Edition of "Smith's Computer" contains 43 more pages of tables than are found in the regular Mercantile Edition. This edition was made for large factories where computations run high and into numerous fractions.

Price, \$5.00

All of the editions are bound in red morocco with patent index.

No,

Publisher's Announcement

The writer has been publishing "Smith's Computer" for nine years and its popularity has increased steadily each year. During these years the business of cream buying has grown wonderfully. In almost every town, in most of the states, where there is no creamery, there are from two to four cream buyers for the large central creameries. These men usually buy cream, milk, butter, eggs and poultry. Many letters have come to the publisher of this computer asking if he had a small, compact set of tables at a small cost that would cover the needs of the creamery and the country "Cream Buyers."

In response to these inquiries and suggestions "Smith's Butterfat Computer" has been published. The tables have been arranged in handy form, to meet every need of these busy men. The type is large and the tables are very simple and easily applied and when once used will prove a boon to the creameryman or the buyer of cream, milk, eggs, butter and butterfat.

My faith in the correctness of every figure in this book is so strong that I will send a copy free to the first person reporting an error in the tables. If you find an error report at once.

Hoping this computer will find a warm reception by those for whom it is intended,

I am respectfully,

J. FRANK SMITH, Publisher,

May, 1915.

Pleasanton, Kansas.

HOW TO APPLY THE TABLES.

The success of the tables in this computer depends on the operator, and to get quick results, one should know how to apply them to the best advantage. The tables are simple and easy to understand and are capable of a wide range of application. Here are a few rules and suggestions that will enable one not familiar with them to apply the tables.

TO FIND BUTTERFAT IN CREAM.

The tables have a wide range for tests of cream, including all tests from 15% to 70% with the half fraction in each table. To find the fat in any lot of cream, use the table representing the test and run to the number representing the number of pounds and the number opposite is the pounds of fat. Example: 25 lbs. cream test 27%. Use the 27 table and run to 25 and you have 6.75 lbs. fat.

TO FIND FAT IN WHOLE MILK.

The tables include the tests of whole milk from 1.5% to 7% with all the tenths. To get the fat in any lot of milk, use the table representing the test and run to the number of pounds. Example, 75 lbs. milk test 3.4%. Use the 34 table and run to 76 and you have 25.84, but since the test is 3.4% in place of 34% the decimal should be moved one place to the left and it leaves 2.58 lbs. fat.

TO FIND VALUE OF FAT AT ANY PRICE.

The tables may be transposed any way and the correct results obtained. Example, 34 lbs. fat at 25 cts. per lb. Use the 34 table and run to 25, or use the 25 table and run to 34. Another example, 34 1-2 lbs. fat at 25 cts. per lb. Use the 34 1-2 table and run to 25. Example, 34 lbs. fat at 25 1-2 cts. per lb. Use the 25 1-2 table and run to 34. Example, 9.8 lbs. fat at 25 cts. per lb. Use the 25 table and run to 98 and move the decimal one place to the left. Example, 45.8 lbs. fat at 25 1-2 cts. per lb. Use the 25 1-2 table and run to 45 and you have the value of the 45 lbs. Then run to 8 and move the decimal one place to the left and add to value of 45 lbs.

TO FIND VALUE OF BUTTER.

Apply the tables the same as in butterfat.

TO FIND FAT IN MORE THAN 100 LBS. OF CREAM OR MILK.

Since the tables only run to 100 it is well to know how to compute the fat in more than 100 lbs. of cream or milk. To compute fat in 450 lbs. cream or milk, use the table representing the test and run to 45 and to the result add one cipher and move decimal one place to right. To compute fat in 567 lbs. milk or fat, use table giving test and run to 5 and add two ciphers and move decimal two places to right. Then compute 67 and add. If it is 6578 lbs. milk test 4.5%. First use the 45 table and run to 65 and move the decimal one place to right. Then run to 78 and move the decimal one place to left and add the two. By carefully studying this system and learning to shift the decimal point correctly one can compute cream and milk up to several thousand pounds with only one addition.

TO FIND VALUE OF EGGS.

Use the table representing the price of eggs and run to the number representing the number of dozen. The result will be the value. If you have parts of a dozen it is necessary to learn the decimal to represent the odd number of eggs to get the exact value. Here is a table that will enable one to compute value of eggs in broken lots: 1, (1-12 doz.) equals .08; 2, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3 doz.) equals .33; 5, (5-12 doz.) equals .42; 6, (1-2 doz.) equals .50; 7, (7-12 doz.) equals .58; 8, (2-3 doz.) equals .67; 9, (3-4 doz.) equals .75; 10, (5-6 doz.) equals .83; 11, (11-12 doz.) equals .92. Example, 13 doz. and 7 eggs at 23 cts. per doz. Use the 23 table and run to 13 and you have \$2.99 and to get the value of 7 eggs run to 58 and you have 13 cts. This is easy and correct and when once used will be very handy.

TO FIND VALUE OF POULTRY.

Apply the tables the same as in finding value of butter or butterfat.

EACH TABLE MAY REPRESENT SEVERAL NUMBERS.

Each table in the computer can be used to represent five or more numbers very easily. Example, 22 1-2 table can represent milk test of 2.25% or cream test 22 1-2% or value of butter or butterfat at 22 1-2 cts. per lb., or any articles at \$2.25 each or per pound, and also \$22.50 per each or dozen or any other way. The varied number of uses to which the tables may be applied depends on the operator and his ability to shift the decimal point. With a little study there is hardly any limit to their application.

If a user of the computer has any difficulty in applying the tables, after reading the instructions, he is invited to write to the publisher, telling his troubles and enclosing a few examples. A reply will follow at once and a special effort made to explain the particular application of the tables.

50-3.00	100-6.00	50-3.25	100-6.50

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

To find butterfat in cream or whole milk: See notes and examples on pages 3 and 4.

To find butterfat in more than 100 lbs. of cream or milk: See notes and examples on pages 3 and 4.

To find value of butter or butterfat or poultry or eggs: See notes and examples on pages 3 and 4.

Each table in this computer can represent five or more numbers. See notes on pages 3 and 4.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

	50-16.00 100-32.00	50-16.25 100-32.50	

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-1 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.
